SASMITA BASKAR

Software Developer · Backend & Cloud
sasmitaruth23@gmail.com | +91 9360836267 | LinkedIn | GitHub | Portfolio | Chennai, India

PROFESSIONAL SUMMARY

Results-driven Software Developer with 1+ year of experience building scalable backend systems, RESTful APIs, and cloud-based applications using AdonisJS, Node.js, TypeScript, and SQL databases. Experienced in collaborating with cross-functional teams to deliver high-quality product features, optimize application performance, and build maintainable software. Strong foundation in Data Structures, Algorithms, database design, and modern software engineering practices with a passion for building customer-centric products.

EDUCATION

M.Sc. Information Technology (Integrated) - Gold Medalist, First Rank *2020 – 2025*
College of Engineering, Guindy (CEG) · Anna University, Chennai
CGPA: 8.92 / 10.0

Core Competencies - Product Development, Backend Development, REST API Development, Software Engineering, Problem Solving, Data Structures & Algorithms, SQL & NoSQL, Microservices, Debugging, Unit Testing

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL

Backend Development: AdonisJS, RESTful API Development, Microservices Architecture, Object-Oriented Programming (OOP), API Design

AI Integration: OpenAI GPT-4 API, OpenAI GPT-3.5 API, Anthropic Claude API, Prompt Engineering, AI-assisted Development (GitHub Copilot, Cursor, Devin)

Databases: PostgreSQL, MySQL, Oracle Database, ClickHouse, Firebase, BigQuery, Redis, Relational Database Management Systems (RDBMS), NoSQL, Database Design, Query Optimization, Indexing, Caching

Cloud, DevOps & Security: Google Cloud Platform (Cloud Run, Cloud Build, Google Cloud Storage, BigQuery), Docker, CI/CD, API Gateway, GCP Secret Manager, OAuth 2.0, JWT Authentication, Rate Limiting, Input Validation, SQL Injection Prevention, Application Security

Testing & Software Engineering: Unit Testing, Debugging, Troubleshooting, Performance Optimization, Code Reviews, Software Development Lifecycle (SDLC), Clean Code, Root Cause Analysis

Message Brokers: RabbitMQ, Google Cloud Pub/Sub

Tools & Integrations: Git, GitHub, Bitbucket, Postman, Swagger/OpenAPI, Mailgun, Slack Webhooks, Microsoft Graph API, Zoom Webhooks, 3CX API

Certifications: Oracle Database Certified, HackerRank SQL Fundamentals, Generative AI (NextGen Intelli)

WORK EXPERIENCE

Software Developer | NGP WebSmart Private Limited, Chennai *May 2025 – Present | Full-time*

- Developed and delivered scalable RESTful APIs using AdonisJS and TypeScript for production applications while maintaining high code quality and security standards - JWT auth, rate limiting, input validation, and SQL injection prevention across 10+ modules.
- Containerized and deployed 8+ microservices on Google Cloud Run with zero-downtime CI/CD pipelines via Cloud Build, reduced deployment time by 60%.
- Collaborated with product managers, frontend developers, and QA engineers to deliver new features within sprint timelines. Integrated GitHub Copilot and Claude AI into daily development workflow, accelerating feature development by ~40% and code review turnaround by 30%.
- Built an AI-assisted log analysis tool using the OpenAI API to automatically triage production errors and recommend fixes, reducing Mean Time to Resolution (MTTR) by 35%.

- Optimized critical PostgreSQL and ClickHouse queries with indexing and caching strategies, cutting API response times by 45%.
- Performed debugging, unit testing, and code reviews to ensure reliable and maintainable software delivery.
- Collaborated cross-functionally with frontend and QA teams, participated in 50+ code reviews ensuring high release quality.

Software Developer Intern | NGP WebSmart Private Limited, Chennai *Jan 2025 – May 2025 | Internship*

- Completed intensive training in Linux, Git, Python, TypeScript, AdonisJS, delivered hands-on tasks from day one.
- Developed scalable backend APIs and optimized database queries for internal applications using AdonisJS and PostgreSQL.
- Worked closely with senior developers during code reviews, debugging, and feature implementation following software engineering best practices.
- Participated actively in code reviews, adopted best practices in error handling, and contributed to test coverage improvements.

Database Engineer Intern | DeepVital Pvt Ltd, IIT Madras Research Park *Jun 2023 – Dec 2023 | Internship*

- Led development of a real-time healthcare data system; improved data retrieval speed by 40% and reduced query latency by 25% through NoSQL schema redesign.
- Designed and integrated Firebase real-time database with cloud APIs to enable live patient monitoring across hospital workflows.
- Built a rapid prototype using Bubble.io for stakeholder validation, accelerating product delivery by 25% and improving team collaboration by 40%.

PROJECTS

Automated Cloud-Native Energy Data Pipeline

- Built a real-time, cloud-native ingestion pipeline consuming energy metrics from ClearVUE.Zero API, processed and routed data to ClickHouse, GCS, and BigQuery for analytics and dashboarding.
- Used RabbitMQ for async event-driven processing, implemented alerting via Slack Webhooks when anomalies are detected.
- Served a web application for market stakeholders to manage energy pricing, analytics, and historical trends.

***Stack**: ClickHouse, GCS, BigQuery, RabbitMQ, AdonisJS, Google Cloud Run*

AI-Augmented Digital Twin for Preventive Healthcare

- Engineered an advanced healthcare web app using a Digital Twin model to simulate patient health trajectories and trigger proactive care alerts via Twilio SMS.
- Integrated OpenAI GPT-3.5 Turbo for natural-language patient report summaries and doctor-facing diagnostic suggestions.
- Reduced clinician data-review time by 30%, system handles 500+ concurrent patient data streams via Firebase real-time DB.

***Stack**: Node.js, Express.js, Firebase, OpenAI GPT-3.5, Twilio, SVG, Google Cloud APIs*

Sales Call Intelligence Platform

- Developed and maintained a real-time call activity monitoring and reporting system using AdonisJS and TypeScript, integrating 3CX, Microsoft Teams, and Zoom to collect, normalize, and process call and meeting data.
- Implemented event-driven data pipelines using Google Cloud Pub/Sub and Cloud Tasks, with MySQL for centralized agent identity management and activity tracking.
- Automated call-center wallboard updates, hourly performance calculations, and Excel report generation with scheduled email delivery.
- Integrated Google Cloud Storage for raw data archival and Slack Webhooks for real-time operational alerts, ensuring reliable data processing, monitoring, and reporting across multiple communication platforms.

***Stack:** Node.js, AdonisJS, TypeScript, MySQL, Google Cloud Pub/Sub, Cloud Tasks, Google Cloud Storage, Microsoft Graph API, Zoom Webhooks, 3CX API, Gmail API, Slack Webhooks, Mailgun*

ACHIEVEMENTS & ADDITIONAL

- Gold Medalist & First Rank Holder - M.Sc. IT (Integrated), Anna University, 2025
- Active LeetCode & HackerRank contributor - Data Structures & Algorithms
- Mentored 5 junior developers, API design patterns, and cloud deployment best practices
